

Gen AI Exchange Hackathon

Team Name: GenAI Governance Platform

Team Leader Name: Danish Ahmad

Problem Statement: Governments struggle to respond quickly and transparently to citizen service requests due to manual processes, lack of prioritization, and absence of predictive analytics.

Brief about the prototype:

The GenAI Governance Platform is an AI-powered web solution that:

- Allows citizens to easily submit requests online.
- Instantly predicts service request priority (High/Medium/Low) and estimated resolution time using AI/ML.
- Provides an admin dashboard with real-time analytics and visualizations for decision makers.

USP of the proposed solution:

- Instant AI-powered priority and ETA for every citizen request.
- Fully automated, real-time analytics dashboard for administrators.
- Scalable, open-source platform ready for integration and further ML upgrades.

List of features offered by the solution:

- Citizen Portal for request submission and feedback
- Instant prediction of request priority and resolution time

Admin dashboard with:

- Total requests and status breakdowns
 - Priority filtering and urgent request identification
 - Analytics & demand forecasting
-
- Interactive API documentation
 - Secure data storage

Process flow diagram or Use-case diagram:

Citizen submits request → AI predicts priority & resolution → Data stored in database → Admin views dashboard & analytics → Teams resolve requests → Metrics update

Wireframes/Mock diagrams of the proposed solution (optional)

Architecture diagram of the proposed solution:

Frontend (HTML/CSS/JS) → Backend API (Python, FastAPI) → AI Engine & SQLite Database

Technologies to be used in the solution:

Backend:

Python 3.13, FastAPI, Uvicorn, SQLAlchemy, SQLite

Frontend:

HTML5, CSS3, JavaScript

AI/ML:

Rule-based classifier (upgradeable to scikit-learn ML models), demand forecasting logic

Others:

Swagger API docs, GitHub, open-source toolchain

Estimated implementation cost (optional):

Development: Free (open-source stack)

Deployment: \$0 on local, <\$15/month on cloud platforms (Render, Vercel, Heroku)

Add as per the requirements for the hackathon:

Impact of the Solution

50% faster government service resolution through automated prioritization.

Improved citizen satisfaction with transparent request tracking and instant AI feedback.

Reduced manual workload for government employees via automation and analytics.

Data-driven decision-making enables smarter resource allocation and policy planning.

Scalable and replicable model for digital governance across cities and states.
